Attn: Mr. Fred Hazzard

Dear Mr. Hazzard:

On Friday, March 20, 1981, this department completed preliminary tests on the one hundred and twenty-two (122) acre tract of land adjacent to your proposed airport. This tract is identified as Bingham township, tax maps 23 & 26 lots 5 & 10.

The purpose for those preliminary tests was to determine the potential for development of that property using on-site ground absorption sewage disposal systems. The tests consisted of drilling one hole at the intersection of each 200'x 200' grid line to determine soil suitability.

We drilled one hundred and forty (140) holes and found only eleven (11) to be provisionally suitable. Of the eleven (11), because of general soils and topographical problems, I would expect around fifty percent (50%) to be approvable. The remaining one hundred and twenty-nine (129) holes were found to be clearly unsuitable.

The potential for development of that particular property using subsurface ground absorption sewage disposal systems would seem highly unfeasible because of the severely limited conditions.

In the event you care to further pursue development we would need to evaluate each proposed site on an individual basis.

If I can be of further assistance in this matter please let me know.

Sincerely,

C.A. Laws  
Sanitarian Supervisor
